## **Two and Three-Footer Assembly Instructions and Hints**

Attach the components as shown in these pictures using the supplied nuts and bolts. You can tighten the nuts with a 7/16" wrench or socket, or use an adjustable wrench or pair of pliers.

- 1) Secure the funnel to the base (3 bolts).
- 2) Mount the ramps to the funnel (4 bolts).
- 3) Remove the protective film from the sign frame. (The sign frame is packaged UNDER the funnel in the bottom of the box of 3' models.) Affix the name or logo of the recipient on the sign under "Proceeds go to", or you can make a whole new poster and slip it into the clear frame if you choose. If you are going to change the recipient from time to time, use removable tape so you don't damage the poster. Mount the sign frame on the back of the ramps as shown (2 bolts). Be sure the large washers are against the sign frame.
- 4) The door easily slips into place and is secured by the padlock.

If you have any questions, please don't hesitate to ask via the email address or phone number shown above, Eastern USA Time Zone.

### **Hints**

- ▶ **Check** all screws regularly to make sure they stay tight.
- ▶ **Clean** your Well regularly. A clean Well attracts more revenue. Use any common household glass cleaner such as Windex and a soft cloth or paper towel. Scratches can be removed with automotive polish or rubbing compound.
- ▶ **Security and Stability:** It is rare that anyone reports a theft problem, especially in supervised locations. Nevertheless, the best security measure is to remove the coins often to remove the temptation. Also, we recommend that you increase the stability and security by placing a couple bags of sand or gravel inside the base (or some other form of weight), or attach a chain to the padlock or around the "neck" of the Well, and then around a nearby post or permanent object. Most customers don't do that, but we recommend it out of an abundance of caution.
- ▶ **If coins get stuck** in the coin-drop area, you can dislodge them by poking a pen or other thin object into the hole on the front of the ramp, or up into the slot area from below. A knife or other thin object works well for this.
- ▶ We would love to see some **digital pictures** of your Well(s) along with an income report after a period of time. Please send pictures and reports to the above email address.

Good luck, and may the coins pour in!

*Steve Dimnick*
